RECOMMENDED INSTALLATION

Mitered Edge

The recommended substrates are Kerdi-Board or Wedi-Board. Both are dimensionally stable and purpose-built for this type of installation. MDF is not suitable for this application, as it expands and contracts at a different rate than porcelain, which can lead to long-term performance issues.

To achieve the 1/5" appearance, a mitered edge can be accomplished through proper fabrication. That said, the mitered edge must include a minimum eased or rounded edge to reduce the risk of chipping:

- **Residential:** 1/8" radius minimum
- **Commercial:** 3/8" radius minimum

For commercial projects, we strongly recommend adding a metal or wood edge protection profile. Even with adequate rounding, commercial countertops are subject to significantly more wear and impact. An edge profile provides the added durability and long-term protection needed in those environments.

FAQs:

How many faces are available for each porcelain tile?
Our 12mm slabs are available in either a single face or a book-match option.
Please note that not all colors are offered in a book-match option.

Are porcelain countertops durable?
Yes, porcelain is highly resistant to heat, scratches, stains, and UV exposure.

Do they require sealing?
No. Porcelain is non-porous and naturally stain-resistant.

How do I clean them?
Use warm water and mild soap or a pH-neutral cleaner for everyday maintenance.

Can I put hot items on the surface?
Yes, porcelain is heat-resistant, though trivets are recommended.

Will the color fade over time?
No, porcelain is UV-resistant and maintains its color.
